## Education

2011–15 **Bachelor of Technology**, *Indian Institution of Technology, Bombay*, Mumbai.

Major : Electrical Engineering

Minor : Mathematics

CGPA : 9.54/10

Interests : Signal Processing, Information Theory

## Research

Autumn **Scheduling for Energy Harvesting Wireless Networks**,

2014 *Guide: Prof. Abhay Karandikar, IIT Bombay.*

Consider a point to point link which is being charged by a renewable energy source where the amount of recharging energy entering the system varies inversely with the amount of energy available. How do we allocate power to such a link so as to maximize throughput? To reduce the search space, we restrict ourselves to waterfilling allocation schemes.

- Simulated the link and they show that average expected throughput over slots admit a quasi concave relation with waterlevel parameter of waterfilling policy.
- Proposed a Stochastic Approximation algorithm based on infinitesimal perturbation analysis to maximize throughput.

Summer **Coded Modulation for Coherent Optical Communication Systems**,

2014 *Guide: Prof. LA Rusch, Centre d'optique, photonique et laser (COPL), Quebec.*

To combat high phase noise from lasers in coherent optical communication systems, we need to use specialized signal constellations and coding schemes. How do various such phase noise optimized constellations stack up when used along with proposed Multi-Level Coded Modulation (MLCM) heuristics?

- Simulated 16 QAM coherent modulation for optical communication system and obtained BER vs OSNR curves for various lasers and signal constellations
- Collected raw data from back-to-back experiments and extracted phase data from raw data with offline carrier Phase Recovery DSP algorithms
- Analysed this data to evaluate the coding gain of MLCM for various constellations

Summer **Fractional Fourier Transform and Chirp Parameter Estimation**,

2013 *Guide: Prof. V.M.Gadre, IIT Bombay.*

Given samples of a noisy chirp signal, can we use a novel signal processing technique called Fractional Fourier Transform to determine the parameters of underlying chirp?

- Surveyed literature on Fractional Fourier Transform and on various ways of discretizing it
- Formulated and proved correctness of a DSP algorithm to estimate chirp parameters from noisy samples. Evaluated accuracy of the algorithm in presence of the noise by simulation
- Proved Uncertainty Principle for a new generalised transform extending fractional Fourier transform

## Awards and Achievements

- Undergraduate Research Award** for work on Fractional Fourier Transform
- Institute Academic Prize** for academic performance in the year 2013-14
- 28th rank** in India in IIT JEE 2011 exam taken by more than 500,000 students
- 3rd rank** in EAMCET 2011 exam written by 300,000 students
- Gold medal** in Indian National Chemistry Olympiad
- Top 300** in the country to be selected for Indian national Physics olympiad and Indian national Astronomy olympiad

---

## Projects

- Autumn 2014 **Traffic Sign Recognition,**  
*Guide: Prof. Ajit Rajwade, IIT Bombay.*
- Trained classifier using challenging German Traffic Sign Recognition Database
  - Implemented Random Forests, Linear Discriminant Analysis and Fisher's Linear Discriminant on Histogram of Oriented Gradients (HOG) featureset to achieve test set classification accuracy of about 97%
- Spring 2014 **LZW compression algorithm and decoding LDPC codes,**  
*Guide: Prof. Ganesh Ramakrishnan, IIT Bombay.*
- Programmed Lempel-Zev-Welch compression and decompression algorithm
  - Achieved about 50 % compression ratio in the compressing large text files
  - Implemented decoding of LDPC codes using sum-product algorithm in Java using specially designed data structure: Factor Graph
- Spring 2014 **Pipelined ARM Processor,**  
*Guide: Prof. Virendra Singh, IIT Bombay.*
- Architected a 6-stage pipelined processor based on the ARM7TDMI Instruction Set
  - Simulated the execution of instructions after designing the processor using Verilog HDL
- Autumn 2013 **Wireless Communication using Amplitude Shift Keying (ASK),**  
*Guide: Prof. J.Mukherjee, IIT Bombay.*
- Designed Analog circuits for ASK modulation and demodulation for medium wave band
  - Transmitted and received the modulated waveforms through monopole antennae
  - Used a microcontroller to send bit data and another to receive the data using UART protocol over this channel, thereby transmitting a text message wirelessly

---

## Seminars and Workshops attended

- December 2013 **Indo-European Winter Academy, IIT Guwahati :** One of 5 selected to represent IIT Bombay. Presented a 1-hour seminar on Optoelectronic Emitters covering physical principles and devices
- January 2014 **ITCSC-INC Winter School, CUHK, Hong Kong :** One of 14 invited from India. Topics covered include Information Theory and Fourier transform for binary functions

---

## Teaching Experience

Tutored 40 strength class once a week helping them solve tutorial sheets and clarifying doubts among other duties like scrutinizing homeworks and answer sheets.

MA 105	<b>Calculus</b>	<i>Autumn 2012,13,14</i>
MA 106	<b>Linear Algebra</b>	<i>Spring 2014</i>
MA 108	<b>Differential equations</b>	<i>Spring 2014</i>

---

## Key Courses

Electrical Engineering	Information Theory, Error Correcting Codes, Digital Signal Processing, Digital Communications, Stochastic Optimisation, Probability and Random Processes
Mathematics & CS	Image Processing, Data structures & Algorithms, Quantum Information and Computing, Graph Theory, Real Analysis, Complex Analysis, Abstract Algebra

---

## Extra-Curricular Activities

- Joint Secretary for Electrical Engineers Student Association (EESA), IIT Bombay. Planned and successfully executed two outings for 300 students
- Publicity Manager for Aagomani 2013, Annual festival of EE Department. Increased outreach of events leading to increase in footfall by 200%
- Awarded *bien* grade in Basic French course attested by Alliance Francaise de Bombay
